

ActionPortfolio Manager

The Only Complete Remedy-Based Portfolio Management System

One Product - One Architecture - One Governance.

[ActionPortfolio Manager](#) is the only fully functional portfolio management system running on the BMC Remedy Action Request System. [ActionPortfolio Manager](#) can be used standalone, with other Project Remedies products, and/or with other Action Request System-based applications including BMC's Remedy IT Service Management Suite. [ActionPortfolio Manager](#) is designed to be used with Project Remedies' [ActionProgram Manager](#) as well as other Remedy Action Request System applications.

[ActionPortfolio Manager](#) helps Management:

- *Align both proposed and active projects with the business' goals and strategies.*
- *Implement strong governance processes.*
- *Understand their project budgets.*
- *Determine when and where there will be skills shortages and skills surpluses.*

Most important, because it was written using the BMC Remedy Action Request System, [ActionPortfolio Manager](#) is flexible. Your specific governance processes and reporting requirements are implemented within its structure.

Configure. Select the Data. Then Chart, Chart, and Chart.

To get started with [ActionPortfolio Manager](#), use the configuration form to define your summarization categories, such as type of money, customer / business unit, performing organization, portfolios, strategies, goals, and sources of funds. When proposed and active projects are entered, each project can be categorized by each summarization category. Select any combination of active and proposed projects, and then you can either look at the details, or generate pie, bar, stacked bar and line charts on the data you selected. For example, if you want to see a pie chart showing the proposed capital projects for each business unit, do a query to select the data, and specify the pie chart. Simple.

The numbers of resources you have or expect at the enterprise level are entered by skill, organization, and location for each month. This enterprise data will be compared against the resources required for your proposed projects to generate a stacked bar / line chart which shows when and where you will have skills surpluses and skills shortages. Simple.

Rapid Implementation. Leveraging your Remedy Investment and Reducing Risk.

It literally takes just a few minutes to install [ActionPortfolio Manager](#) on your existing Remedy environment. Customizing it to fit your specific requirements usually takes another week or two.

Because it runs on your existing Remedy Action Request System platform, [ActionPortfolio Manager](#) leverages your investment in licenses, user training, and administration.

For more information on [ActionPortfolio Manager](#) and how it might be used to satisfy your IT Governance, budgeting, and resource management requirements, and to schedule a demonstration, please contact Stan Feinstein or your BMC representative.

Project Remedies Inc.

Leveraging your Investment in
BMC's Remedy
Action Request System.

ActionProgram Manager and ActionPortfolio Manager make up Project Remedies Inc.'s IT Governance Suite. They were developed with BMC's Remedy Action Request System. They are the only IT Governance Suite that integrate with an Asset Management System, and help:

- Reduce Costs.
- Improve Services Quality.
- Speed Time to Market.
- Integrate Staff into a Single Resource Pool.

"ActionPortfolio Manager is simple to use yet very robust. PRI worked closely with us so it fit our processes and specific requirements. They did everything they said they would."

"IT Project Portfolio Manager works so well with ActionProgram Manager. It gives us a complete picture of our resources requirements and usage. No other set of products offered this combination of flexibility and robustness."
